In 2018, two varieties of naked oats, ‘Santini’ and ‘Marco Polo’, were registered in the Czech Republic. In the [Plant Variety Rights and National List Database](#) (in Czech), these are described as:

- Santini - Santini is a naked, moderately early variety. Medium height, high lodging resistance, moderately resistant to straw breakage. Medium to large grain, low husk grain content, medium test weight. Medium resistance to powdery mildew, medium resistance to leaf spot, resistant to oat rust. Grain yield very high. Crude protein content low, fiber content low, fat content low.
- Marco Polo - Marco Polo is a naked, moderately early variety. Medium to large grain, low husk grain content, medium test weight. Resistant to powdery mildew, medium resistance to leaf spot, resistant to oat rust. Grain yield very high. Crude protein content medium, fiber content low, fat content low.

In the Slovak Republic, one variety of naked oat, ‘Podpolanec’, was registered in 2018:

- Podpolanec is a naked, moderately early variety. Medium height, high lodging resistance, moderately resistant to straw breakage. Medium grain, low to medium husk grain content, high test weight. Medium resistance to powdery mildew, medium resistance to leaf spot, resistant to oat rust. Grain yield very high. Crude protein content high, fiber content low, fat content low.
