

Genetic variation in oat grain quality parameters

**Irene Griffiths,
Sandy Cowan, Catherine Howarth,
Tim Langdon, Pilar Martinez Martin,
Athole Marshall**

- Background
- Panicle variation in quality characteristics
 - TGW
 - KC
- Grain shape analysis
- Conclusions
- Further work

Milling quality

- Specific weight
 - Measure of density/packing
- Kernel content
 - Percentage groat in relation to whole grain
- Hullability
 - The ease with which the husk is removed
- Thousand grain weight

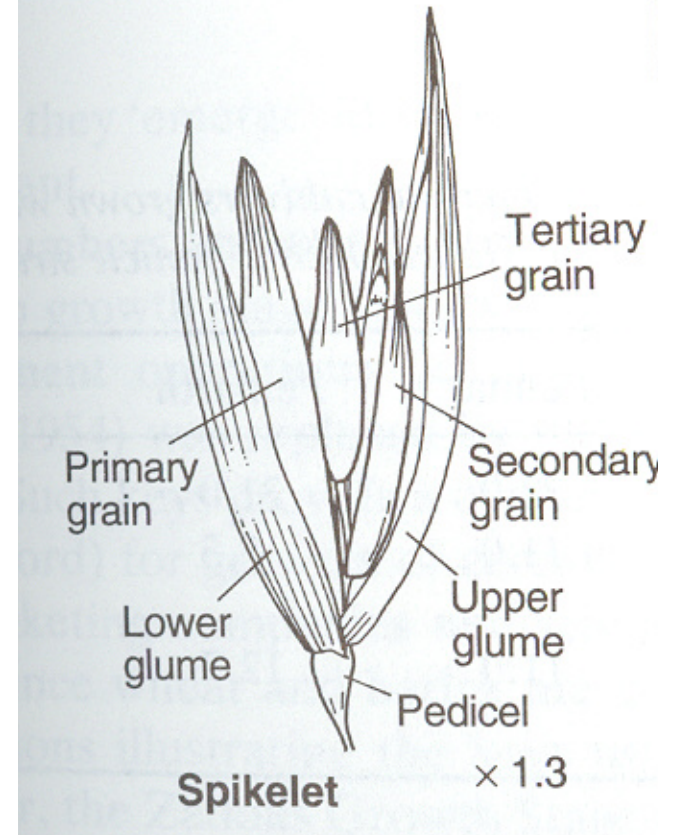

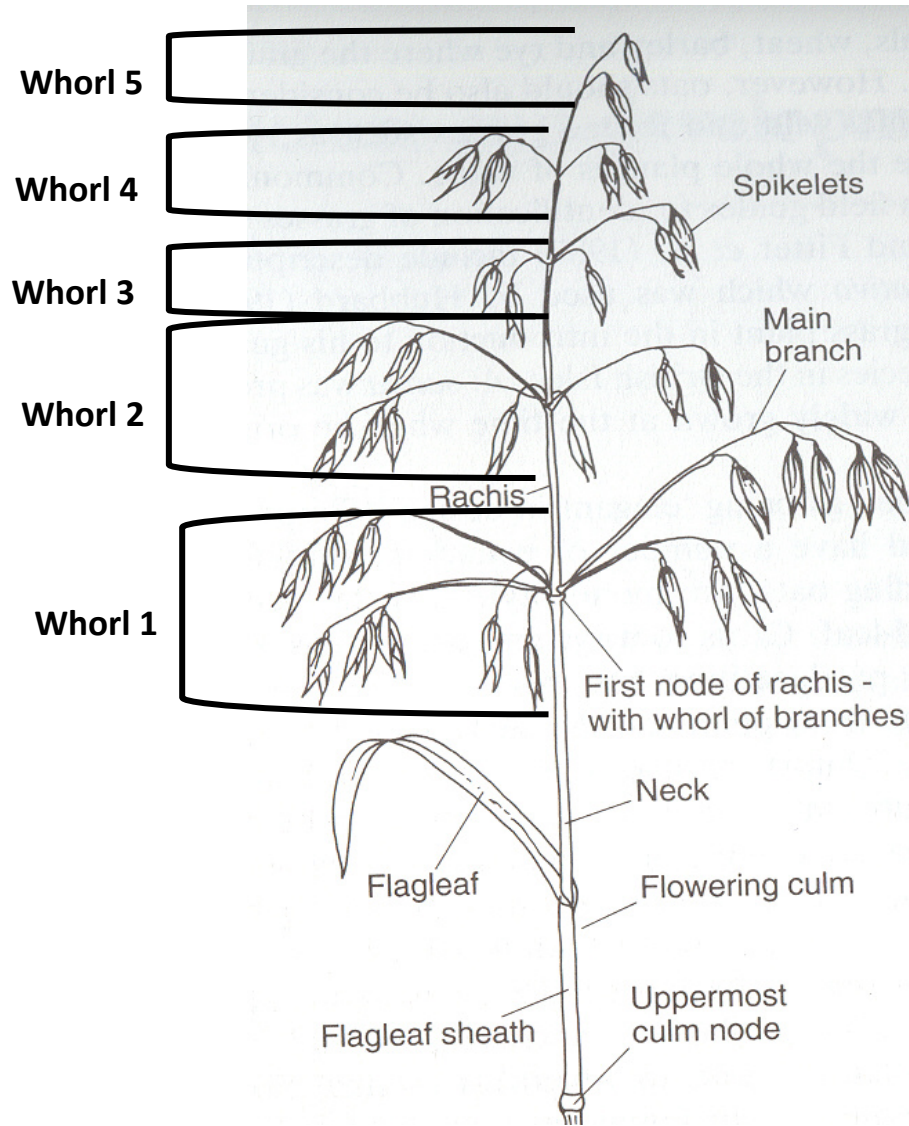

Replicated trial conducted over two years at Aberystwyth

Cultivar name	Year of cross	Years recommended	Yield (t/Ha) while recommended*
Solva	1976	1988 – 1998	6.9 – 7.3
Gerald	1981	1993 – present	6.8 – 8.1
Millennium	1987	2000 – 2006	7.5 – 8.1
Kingfisher	1989	1999 – 2003	7.5 – 7.7
Buffalo	1993	2003 – 2005	8.0 – 8.1
Penderi	1994	-	-
Mascani	1995	2004 – present	7.8 – 8.2
Brochan	1996	2007 – present	8.3 – 8.3
Tardis	1996	2007 – present	8.5 – 8.6
Balado	1998	2010	9.0
01-148Cn4	2001		-
01-150Cn1	2001		-

* in official HGCA yield trials

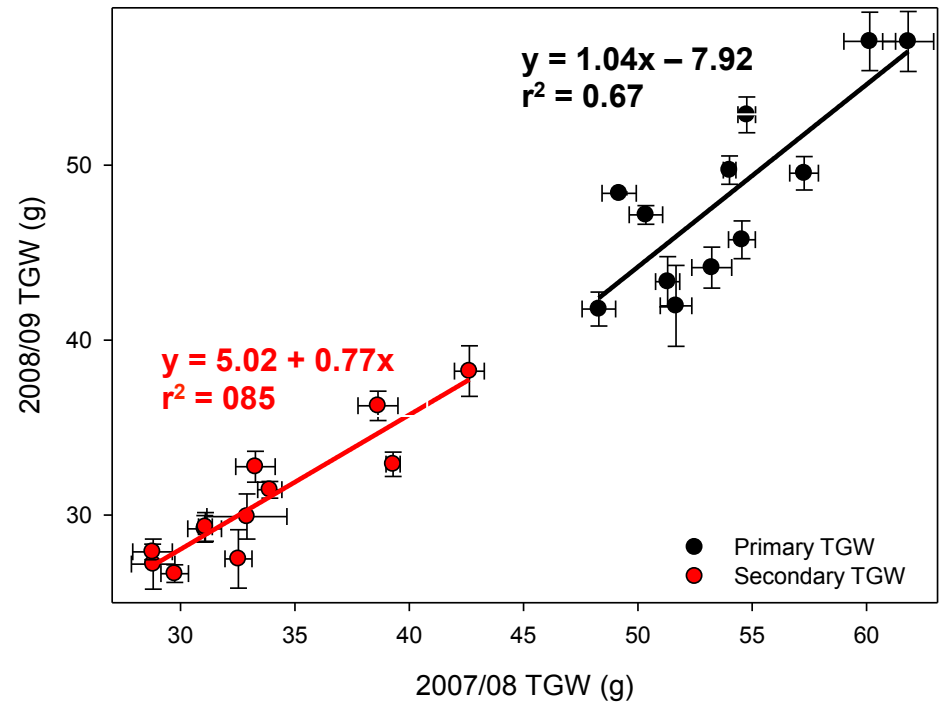

Panicle Structure

TGW

Separated TGW

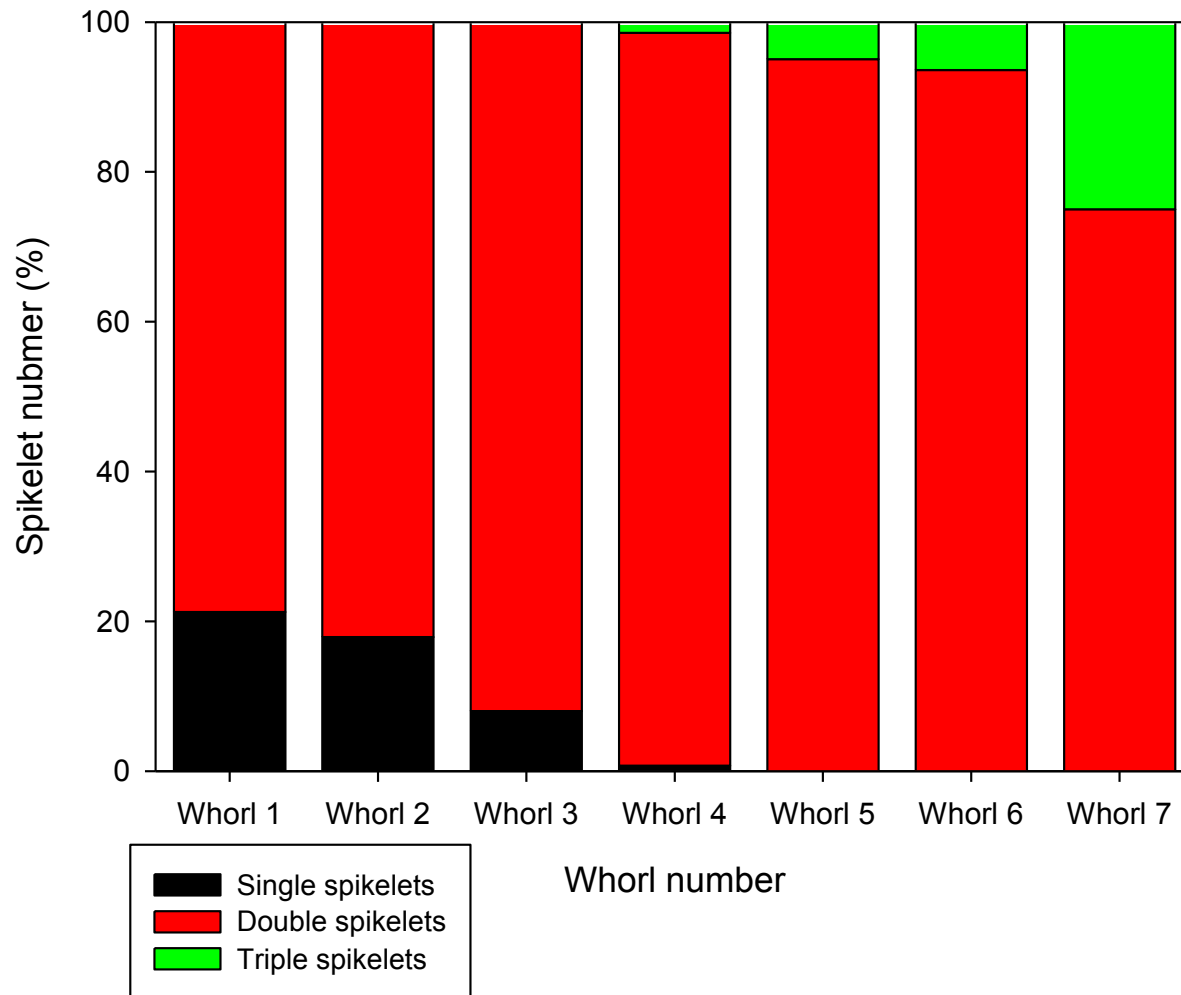

Tardis Panicle TGW

Whorl	Total	1°	2°	3°
6	49.2g	76.3g	48.0g	18.9g
5	45.2g	62.8g	45.7g	19.1g
4	44.2g	61.3g	43.9g	17.9g
3	42.5g	58.4g	37.9g	12.9g
2	39.8g	53.9g	28.4g	13.7g
1	37.3g	51.5g	24.7g	19.7g

Grain proportions per whorl

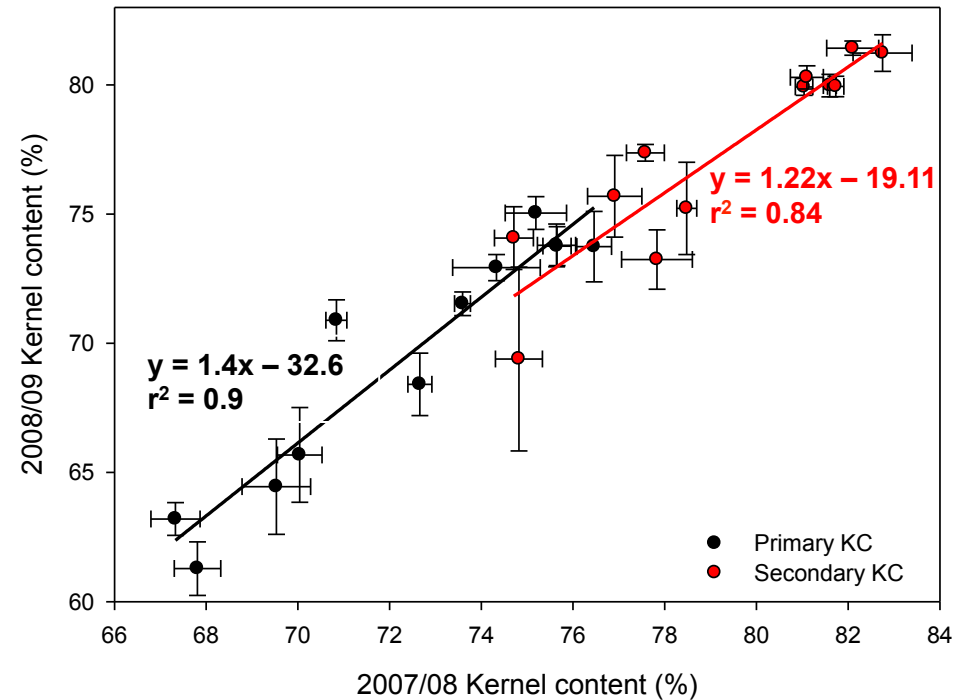

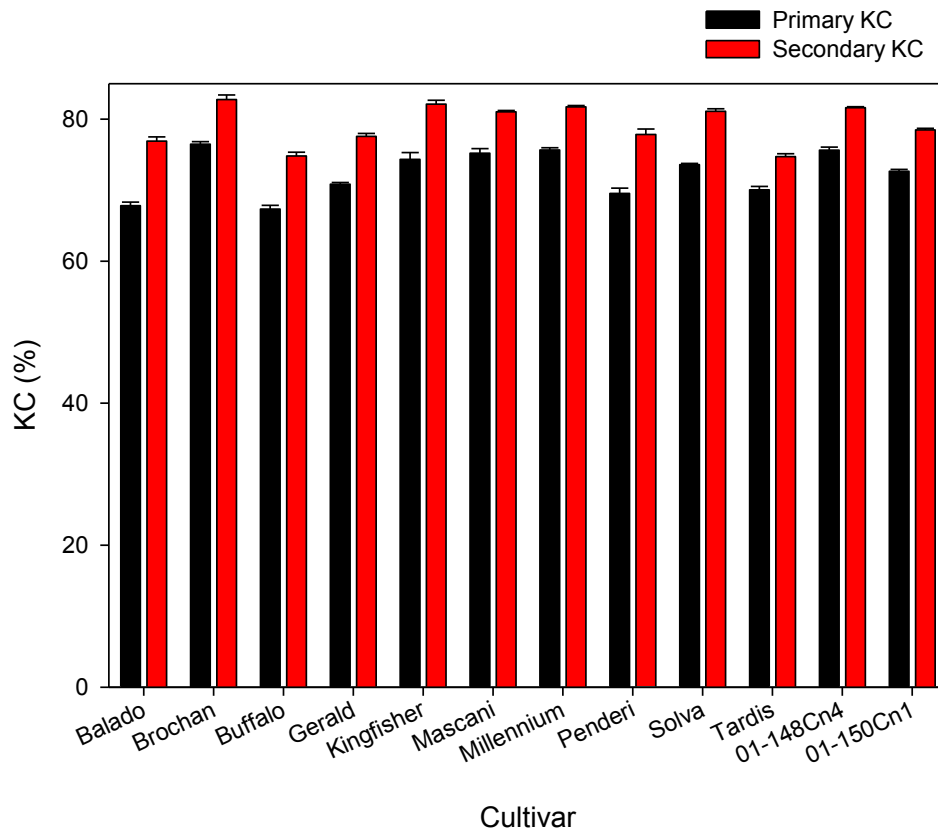

Brochan in 2007/08

Kernel content

Separated kernel content

- Kernel content was conducted on a bulk grain sample for each cultivar and also on a separated sample of primary and secondary grain
- The kernel content of the secondary grain was always higher than that of the primary grain
- High correlation in kernel content obtained between seasons

Method development

- **MARVIN**
 - Grain analyser
 - Measures the length, width and area of individual grain

Dendrogram displaying similarities between cultivars based on 42 grain traits

Conclusions

- Winter oats used in the study could be divided into two groups based on grain traits, panicle structure and flowering traits
- Variation across the panicle for TGW is large
- Grain shape analysis showed the bi-modal distribution of oat grains, MATLAB analysis allows characterization of harvest samples and greater understanding of grain lots

Further work

- Understand the grain size of new varieties
- Investigate links between grain size, panicle variation and mill performance
- Investigate methods of high throughput grain measurements
- Identify lines with more uniform grain size for higher mill performance
