

### **Retirement of Dr. Calvin O. Qualset**

Cal Qualset retired from UC Davis, California, USA, in 1994. His work focused mainly on wheat, triticale, and *Dasypyrum*, but he also contributed to oat research with a handful of publications and ten varieties released. Cal contributed oat BYD (Barley Yellow Dwarf Virus) screening for the Quaker Oat project for five years. [Attached](#) is a list of reports and varieties.

In addition, we can thank Cal for mentoring [Pamela Zwer](#) and [Luiz Federizzi](#), both of whom did their PhD research in his lab.
